

Technical Information

Proline Promag W 400

Electromagnetic flow measuring system

The specialist for all water and wastewater applications

Application

- Accurate bidirectional measurement of liquids with a minimum conductivity of $\geq 5 \mu\text{S}/\text{cm}$ in water/wastewater applications.
- The electromagnetic measuring principle is unaffected by pressure and temperature. Additionally the flow profile has a minimal effect on the measurement results.

Device properties

- Nominal diameter: DN 25 to 2000 (1 to 78")
- Liner (HG, PU) with worldwide drinking water approvals: KTW, WRAS, NSF, ACS
- Process pressure: max. 40 bar (580 psi)
- Durable polycarbonate transmitter housing
- Graphical local display with operation from the outside (Touch Control)
- Up to 3 outputs and 1 input including 4-20 mA HART communication

Your benefits

The specialist for very demanding water and wastewater applications

Sizing – correct product selection

Applicator – the reliable, easy-to-use tool for selecting and sizing measuring devices for every application

Installation – simple and efficient

- Compact design
- Certified corrosion protection (EN ISO 12944) needed for submerged or direct burial installations
- Compact and remote version perfectly suited to meet the requirements of the water/wastewater industry

Commissioning – reliable and intuitive

- Guided parameterization – "Make-it-run" wizards
- Integrated web server for fast commissioning

Operation – increased measurement availability

- Simultaneous measurement: volume flow and conductivity
- Immune to process influences
- Diagnostics; automatic data restore by HistoROM

Cost-effective life cycle management by W@M

Document information

Symbols used

Electrical symbols

Symbol	Meaning
 A0011197	Direct current A terminal to which DC voltage is applied or through which direct current flows.
 A0011198	Alternating current A terminal to which alternating voltage is applied or through which alternating current flows.
 A0017381	Direct current and alternating current ■ A terminal to which alternating voltage or DC voltage is applied. ■ A terminal through which alternating current or direct current flows.
 A0011200	Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
 A0011199	Protective ground connection A terminal which must be connected to ground prior to establishing any other connections.
 A0011201	Equipotential connection A connection that has to be connected to the plant grounding system: This may be a potential equalization line or a star grounding system depending on national or company codes of practice.

Symbols for certain types of information

Symbol	Meaning
 A0011182	Allowed Indicates procedures, processes or actions that are allowed.
 A0011183	Preferred Indicates procedures, processes or actions that are preferred.
 A0011184	Forbidden Indicates procedures, processes or actions that are forbidden.
 A0011193	Tip Indicates additional information.
 A0011194	Reference to documentation Refers to the corresponding device documentation.
 A0011195	Reference to page Refers to the corresponding page number.
 A0011196	Reference to graphic Refers to the corresponding graphic number and page number.

Symbols in graphics

Symbol	Meaning
1, 2, 3, ...	Item numbers
1., 2., 3. ...	Series of steps
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections
 A0013441	Flow direction

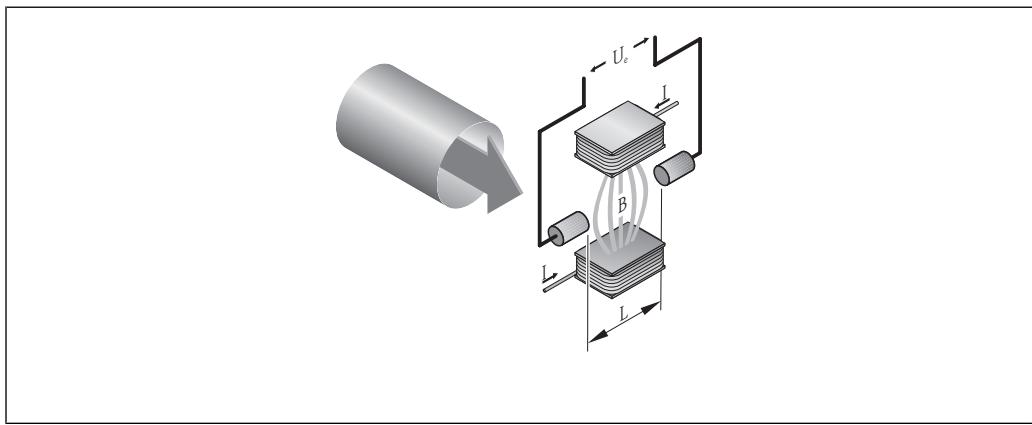

Symbol	Meaning
 A0011187	Hazardous area Indicates a hazardous area.
 A0011188	Safe area (non-hazardous area) Indicates a non-hazardous area.

Function and system design

Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced is proportional to the flow velocity and is supplied to the amplifier by means of two measuring electrodes. The flow volume is calculated via the pipe cross-sectional area. The DC magnetic field is created through a switched direct current of alternating polarity.

A0017035

 1 $U_e = B \cdot L \cdot v$; $Q = A \cdot v$

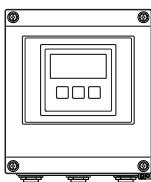

- U_e Induced voltage
- B Magnetic induction (magnetic field)
- L Electrode spacing
- v Flow velocity
- Q Volume flow
- A Piping cross-section
- I Current

Measuring system

The device consists of a transmitter and a sensor.

Two device versions are available:

- Compact version – the transmitter and sensor form a mechanical unit.
- Remote version – the transmitter and sensor are mounted separately from one another.

Transmitter**Promag 400**

A0017117

Device versions and materials:

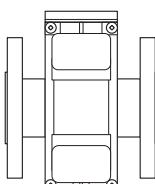

- Compact housing: polycarbonate plastic
- Wall-mount housing: polycarbonate plastic

Configuration:

- External operation via four-line, illuminated local display with touch control and guided menus ("Make-it-run" wizards) for applications
- Via operating tools (e.g. FieldCare)
- Via Web browser (e.g. Microsoft Internet Explorer)

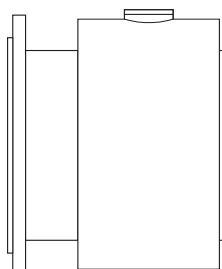

Sensor**Promag W**

Fixed flange: DN 25 to 300 (1 to 12")

A0017040

Fixed flange: DN 350 to 2000 (14 to 78")

A0017041

Nominal diameter range: DN 25 to 2000 (1 to 78")

Materials:

- Sensor housing: aluminum coated AlSi10Mg, carbon steel with protective varnish
- Sensor connection housing: aluminum coated AlSi10Mg, polycarbonate
- Measuring tube: stainless steel 1.4301/304, 1.4306/304L; for flanges made of carbon steel with Al/Zn protective coating or protective varnish
- Liner: hard rubber, polyurethane
- Seals: as per DIN EN 1514-1
- Electrodes: 1.4435/304L, Alloy C-22, tantalum
- Ground disks: 1.4435/316L, Alloy C-22, tantalum

Input**Measured variable****Direct measured variables**

- Volume flow (proportional to induced voltage)
- Electrical conductivity

Calculated measured variables

Mass flow

Measuring rangeTypically $v = 0.01$ to 10 m/s (0.03 to 33 ft/s) with the specified accuracy*Flow characteristic values in SI units*

Nominal diameter [mm]		Recommended flow min./max. full scale value ($v \sim 0.3/10 \text{ m/s}$) [m ³ /h]	Factory settings

Remote version**2 Connecting the remote version**

- a Transmitter: main electronics module with terminals
- b Sensor: connection module
- c Electrode cable
- d Coil current cable
- n.c. Not connected, insulated cable shields

Terminal No. and cable colors: 6/5 = brown; 7/8 = white; 4 = green; 36/37 = yellow

Supply voltage

	Order code for "Power supply"	Terminal voltage	Frequency range
Option A: AC 100 to 230 V		AC 85 to 260 V	47 to 63 Hz
Option B: AC/DC 24 V		AC/DC 18 to 30 V	44 to 66 Hz/-

Power consumption*Transmitter*

	Order code for "Power supply"	Maximum power consumption
Option A: AC 100 to 230 V		30 VA
Option B: AC/DC 24 V		30 VA/8 W

Current consumption*Transmitter*

	Order code for "Power supply"	Maximum current consumption	Maximum switch-on current
Option A: AC 100 to 230 V		145 mA	25 A (< 5 ms)
Option B: AC/DC 24 V		350 mA	27 A (< 5 ms)

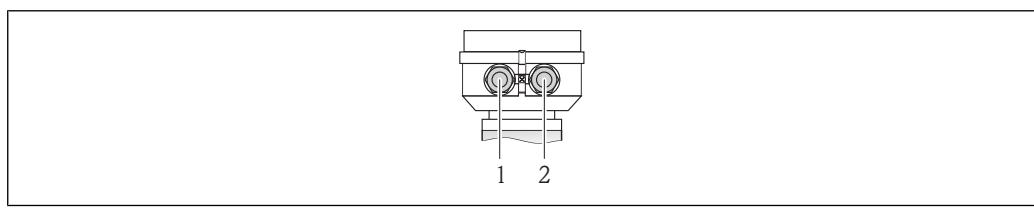

Power supply failure

- Totalizers stop at the last value measured.
- Configuration is retained in the plug-in memory (HistoROM DAT).
- Error messages (incl. total operated hours) are stored.

Electrical connection**Connecting the transmitter**

A0017113

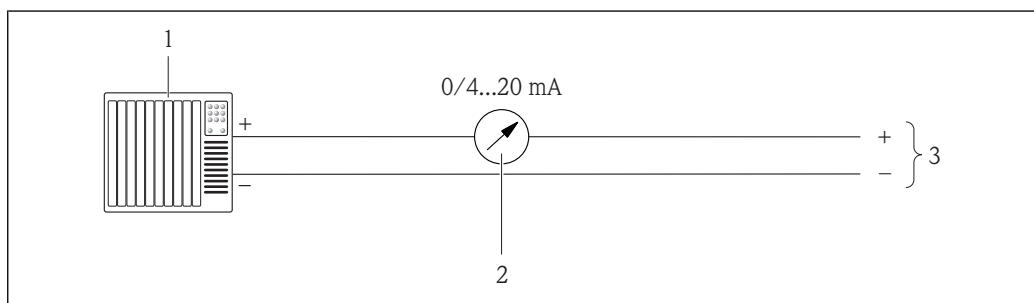

- A Compact version
- B Remote version
- 1 Cable entry for supply voltage
- 2 Cable entry for signal transmission
- 3 Cable entry for coil current cable
- 4 Cable entry for electrode cable

Remote version connection

A0017267

- 1 Electrode cable
- 2 Coil current cable

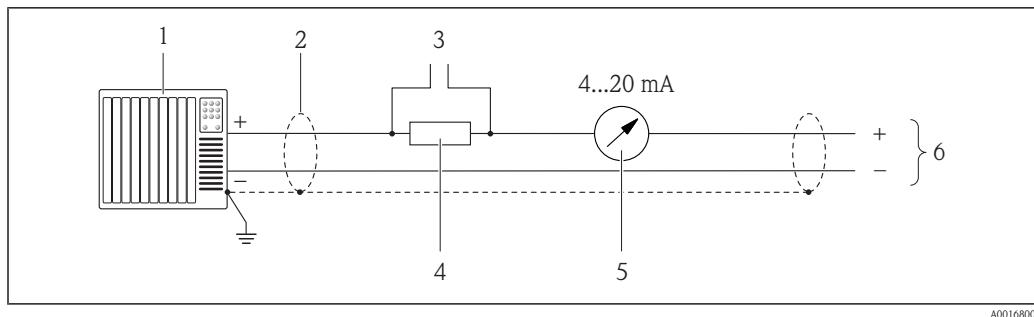

- Fix the cable run or route it in an armored conduit. Cable movements can influence the measuring signal especially in the case of low fluid conductivities.
- Route the cable well clear of electrical machines and switching elements.
- Ensure potential equalization between sensor and transmitter (→ 15).

Connection examples

A0017162

3 Connection example for 0-20 mA current output (active) and 4-20 mA current output (active)

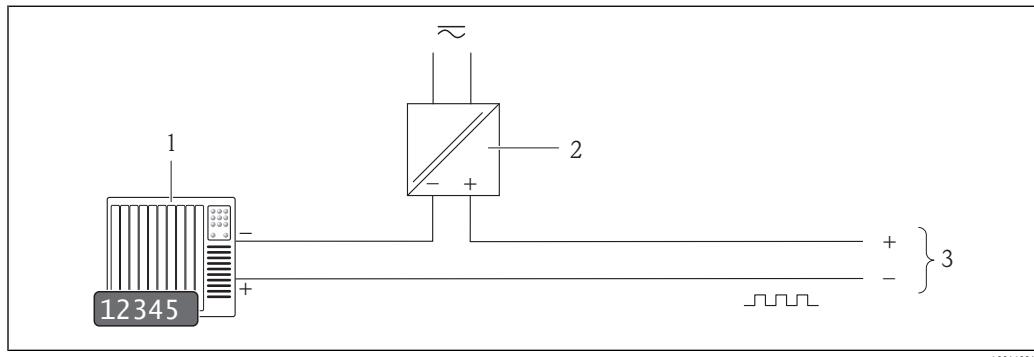

- 1 Automation system with current input (e.g. PLC)
- 2 Analog display unit: observe maximum load (→ 8)
- 3 Transmitter

4 Connection example for 4-20 mA HART current output (active)

- 1 Automation system with current input (e.g. PLC)
- 2 Observe cable specification (→ 18)
- 3 Connection for HART operating devices (→ 50)
- 4 Resistor for HART communication ($\geq 250\Omega$): observe maximum load (→ 8)
- 5 Analog display unit: observe maximum load (→ 8)
- 6 Transmitter

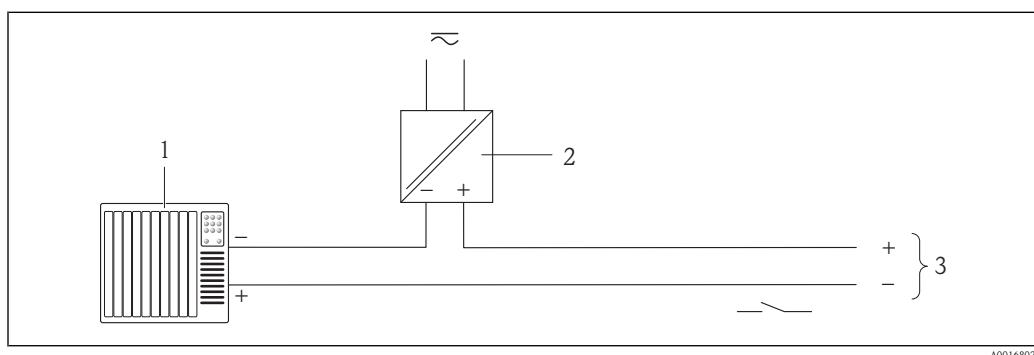

A0016800

5 Connection example for pulse/frequency output (passive)

- 1 Automation system with pulse/frequency input (e.g. PLC)
- 2 Voltage supply
- 3 Transmitter: observe input values (→ 8)

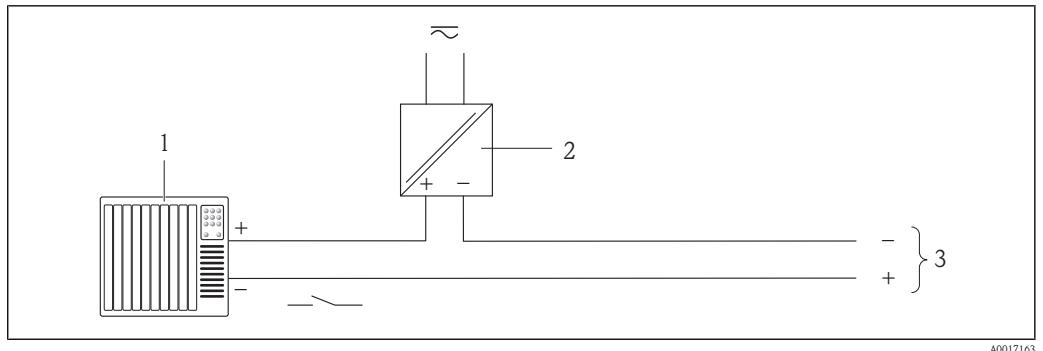

A0016801

6 Connection example for switch output (passive)

- 1 Automation system with switch input (e.g. PLC)
- 2 Voltage supply
- 3 Transmitter: observe input values (→ 8)

A0016802

7 Connection example for status input

- 1 Automation system with status output (e.g. PLC)
- 2 Voltage supply
- 3 Transmitter: observe input values (→ 8)

Potential equalization

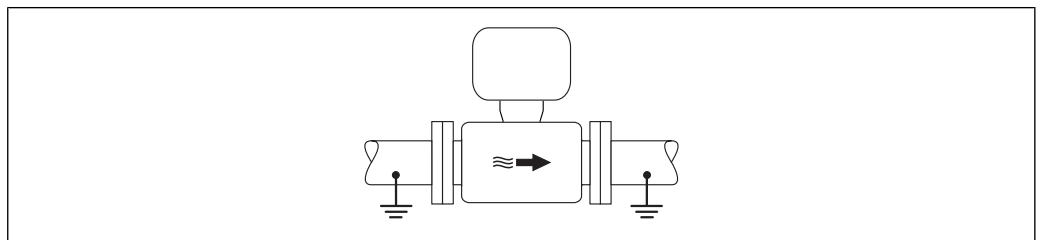

Requirements

Please consider the following to ensure correct measurement:

- Same electrical potential for the fluid and sensor
- Company-internal grounding concepts
- Pipe material and grounding

Connection examples for standard situations

Metal, grounded pipe

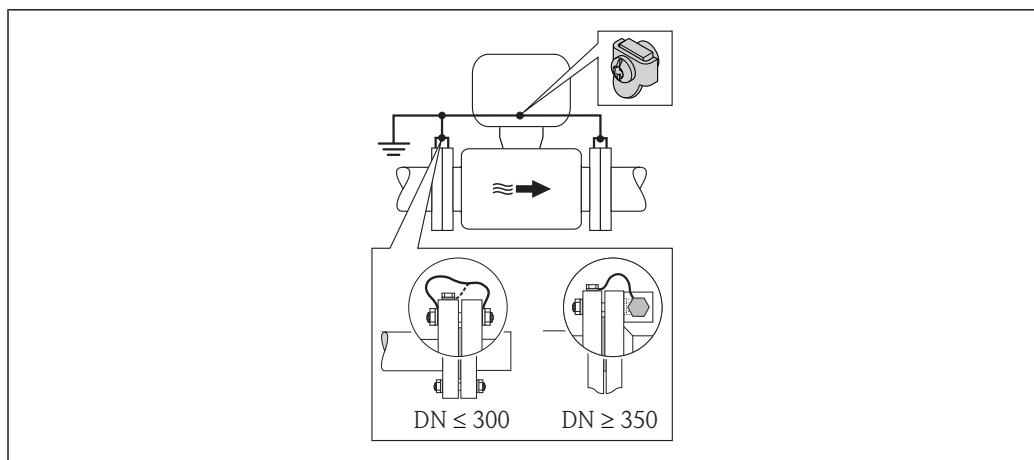

8 Potential equalization via measuring tube

Connection example in special situations

Unlined and ungrounded metal pipe

This connection method also applies in situations where:

- The customary potential equalization is not used
- Equalizing currents are present

9 Potential equalization via ground terminal and pipe flanges

Note the following when installing:

- Connect both sensor flanges to the pipe flange via a ground cable and ground them.
- Connect the connection housing of the transmitter or sensor to ground potential by means of the ground terminal provided for the purpose. To mount the ground cable:
 - If $DN \leq 300$ (12"): Mount the ground cable directly on the conductive flange coating of the sensor with the flange screws.
 - If $DN \geq 350$ (14"): Mount the ground cable directly on the metal transport bracket.

Ground cable	Copper wire, at least 6 mm^2 (0.0093 in^2)
---------------------	--

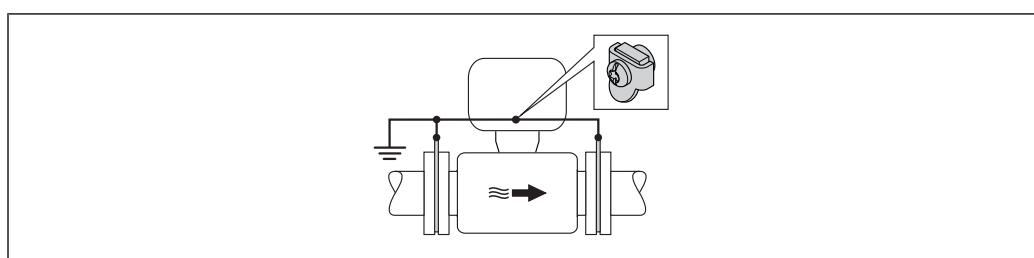

For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.

The necessary ground cable can be ordered from Endress+Hauser (→ 52).

Plastic pipe or pipe with insulating liner

This connection method also applies in situations where:

- The customary potential equalization is not used
- Equalizing currents are present

10 Potential equalization via ground terminal and ground disks

Note the following when installing:

The ground disks must be connected to the ground terminal via the ground cable and be connected to ground potential.

Ground cable	Copper wire, at least 6 mm^2 (0.0093 in^2)
---------------------	--

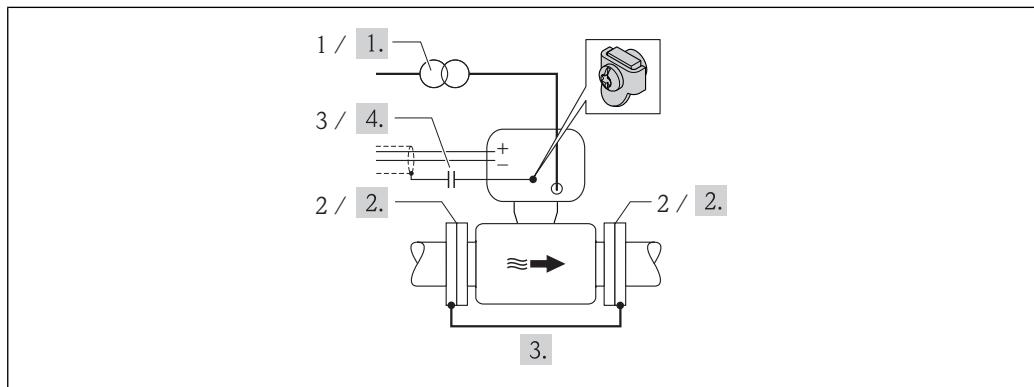

For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.

i The ground cable and ground disks can be ordered from Endress+Hauser (→ 52).

Pipe with a cathodic protection unit

This connection method is only used if the following two conditions are met:

- Metal pipe without liner or pipe with electrically conductive liner
- Cathodic protection is integrated in the personal protection equipment

A0016319

11 Potential equalization and cathodic protection

- 1 Isolation transformer power supply
- 2 Electrically isolated from the pipe
- 3 Capacitor

Ground cable	Copper wire, at least 6 mm ² (0.0093 in ²)
--------------	---

1. Connect the measuring device to the power supply such that it is floating in relation to the protective ground.
2. Install the sensor in the pipe in a way that provides electrical insulation.
3. Connect the two flanges of the pipe to one another via a ground cable.
4. Guide the shield of the signal lines through a capacitor.

i For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.

i The necessary ground cable can be ordered from Endress+Hauser (→ 52).

Terminals

Transmitter

- Supply voltage cable: plug-in screw terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Signal cable: plug-in screw terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Electrode cable: plug-in screw terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Coil current cable: screw terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

Sensor

Screw terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

Cable entries

Transmitter and sensor

- Cable gland:
 - For standard cable: M20 × 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
 - For reinforced cable: M20 × 1.5 with cable Ø 9.5 to 16 mm (0.37 to 0.63 in)
- Thread for cable entry:
 - NPT ½"
 - G ½"
 - M20

i If metal cable entries are used, use a grounding plate.

Cable specification**Permitted temperature range**

- -40°C (-40°F)... $\geq 80^{\circ}\text{C}$ (176°F)
- Minimum requirement: cable temperature range \geq ambient temperature + 20 K

Power supply cable

Standard installation cable is sufficient.

Signal cable*Current output*

- For 0-20 mA and 4-20 mA: standard installation cable is sufficient.
- For 4-20 mA HART: Shielded cable recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Status input

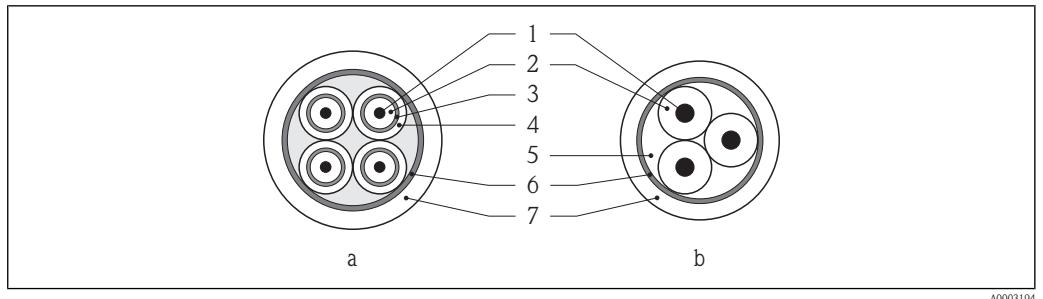

Standard installation cable is sufficient.

Connecting cable for remote version*Electrode cable*

Standard cable	$3 \times 0.38 \text{ mm}^2$ (20 AWG) with common, braided copper shield ($\varnothing \sim 7 \text{ mm}$ (0.28")) and individually shielded cores
Cable for empty pipe detection (EPD)	$4 \times 0.38 \text{ mm}^2$ (20 AWG) with common, braided copper shield ($\varnothing \sim 7 \text{ mm}$ (0.28")) and individually shielded cores
Conductor resistance	$\leq 50 \Omega/\text{km}$ (0.015 Ω/ft)
Capacitance: core/shield	$\leq 420 \text{ pF/m}$ (128 pF/ft)
Operating temperature	-20 to $+80^{\circ}\text{C}$ (-68 to $+176^{\circ}\text{F}$)

Coil current cable

Standard cable	$2 \times 0.75 \text{ mm}^2$ (18 AWG) with common, braided copper shield ($\varnothing \sim 7 \text{ mm}$ (0.28")) and individually shielded cores
Conductor resistance	$\leq 37 \Omega/\text{km}$ (0.011 Ω/ft)
Capacitance: core/core, shield grounded	$\leq 120 \text{ pF/m}$ (37 pF/ft)
Operating temperature	-20 to $+80^{\circ}\text{C}$ (-68 to $+176^{\circ}\text{F}$)
Test voltage for cable insulation	$\leq \text{AC } 1433 \text{ V r.m.s. } 50/60 \text{ Hz or } \geq \text{DC } 2026 \text{ V}$

A0003194

 7 *Outer jacket*

i A connecting cable can be ordered from Endress+Hauser for IP68:

- Pre-terminated cables that are already connected to the sensor.
- Pre-terminated cables, where the cables are connected by the customer onsite (incl. tools for sealing the connection compartment)

Reinforced connecting cable

Use in the following situations:

- When laying the cable directly in the ground
- Where there is a risk of damage from rodents
- If using the device below IP68 degree of protection

i The reinforced connecting cable with an additional, reinforcing metal braid can be ordered from Endress +Hauser (→ **52**).

Operation in zones of severe electrical interference

The measuring system meets the general safety requirements (→ **51**) and EMC specifications (→ **26**).

Grounding is by means of the ground terminal provided for the purpose inside the connection housing. The stripped and twisted lengths of cable shield to the ground terminal must be as short as possible.

Performance characteristics

Reference operating conditions

To DIN EN 29104

- Fluid temperature: $+28 \pm 2^\circ\text{C}$ ($+82 \pm 4^\circ\text{F}$)
- Ambient temperature range: $+22 \pm 2^\circ\text{C}$ ($+72 \pm 4^\circ\text{F}$)
- Warm-up period: 30 min

Installation

- Inlet run $> 10 \times \text{DN}$
- Outlet run $> 5 \times \text{DN}$
- Sensor and transmitter grounded.
- The sensor is centered in the pipe.

i To calculate the measuring range, use the *Applicator sizing tool* (→ **53**)

Maximum measured error

Accuracy of outputs

o.r. = of reading; *o.f.s.* = of full scale value

The outputs have the following base accuracy specifications.

Current output

Accuracy	Max. $\pm 0.05\%$ o.f.s. or $\pm 5\text{ }\mu\text{A}$
-----------------	--

Pulse/frequency output

Accuracy	Max. $\pm 50\text{ ppm}$ o.r.
-----------------	-------------------------------

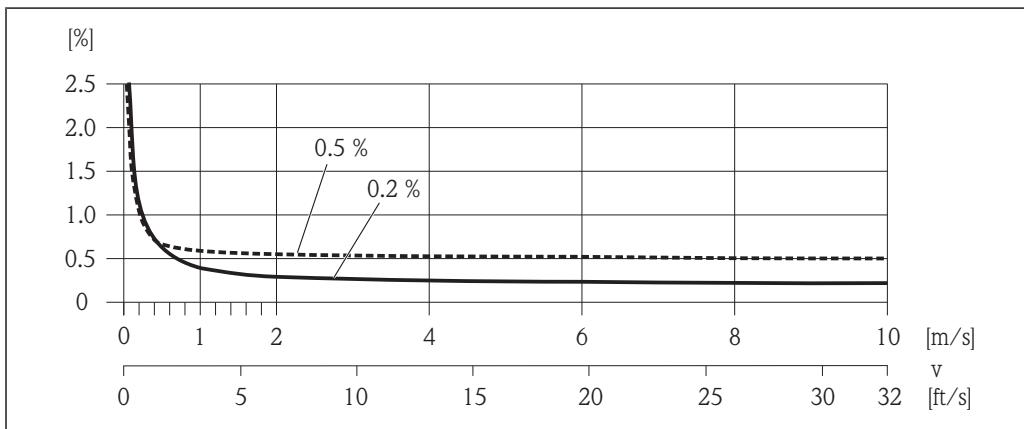

Error limits under reference operating conditions

o.r. = of reading

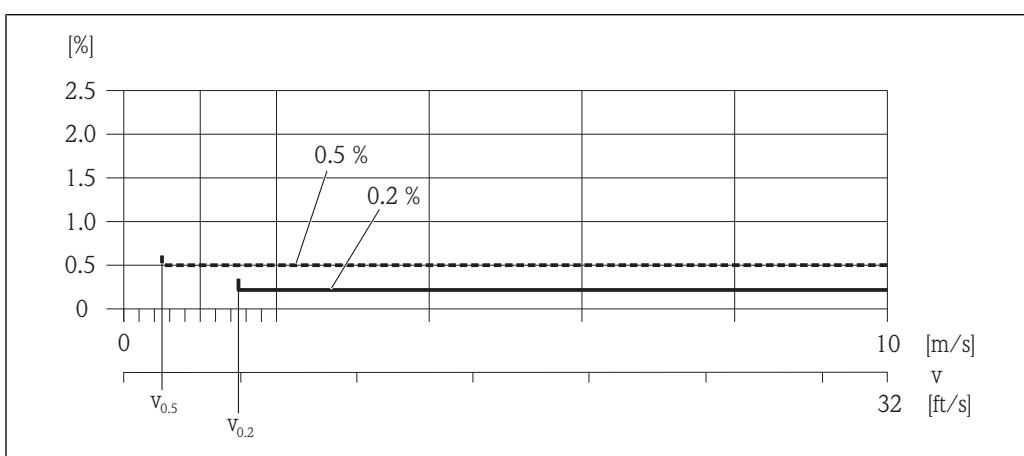

Pulse output

- $\pm 0.5\%$ o.r. $\pm 1\text{ mm/s}$ (0.04 in/s)
- Optional: $\pm 0.2\%$ o.r. $\pm 2\text{ mm/s}$ (0.08 in/s)

 Fluctuations in the supply voltage do not have any effect within the specified range.

 13 Maximum measured error in % o.r.

 14 Flat Spec in % o.r.

Flat Spec flow values 0.5 %

Nominal diameter		v_{0.5}	
[mm]	[in]	[m/s]	[ft/s]
25 to 600	1 to 24	0.5	1.64

Flat Spec flow values 0.2 %

Nominal diameter		$v_{0.2}$	
[mm]	[in]	[m/s]	[ft/s]
25 to 600	1 to 24	1.5	4.92

Repeatability o.r. = of readingmax. $\pm 0.1\%$ o.r. ± 0.5 mm/s (0.02 in/s)**Influence of ambient temperature** o.r. = of reading; o.f.s. = of full scale value**Current output**

Temperature coefficient	Typically ± 50 ppm/ $^{\circ}\text{C}$ o.r. or ± 1 $\mu\text{A}/^{\circ}\text{C}$
-------------------------	---

Pulse/frequency output

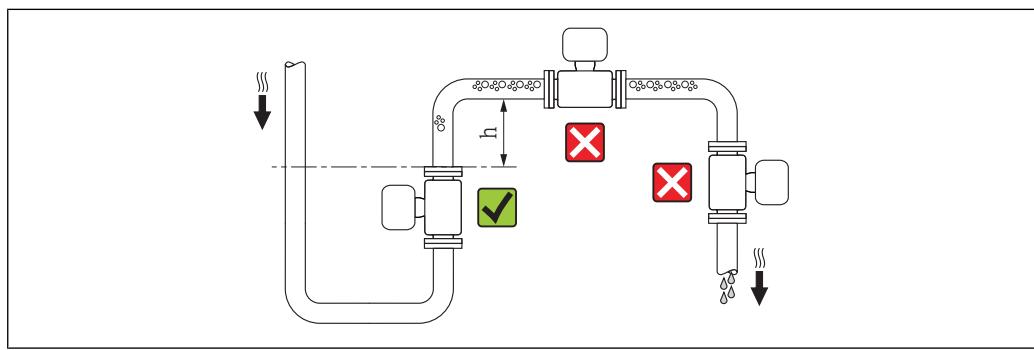

Temperature coefficient	Max. ± 50 ppm/ $^{\circ}\text{C}$
-------------------------	---------------------------------------

Installation

No special measures such as supports are necessary. External forces are absorbed by the construction of the device.

Mounting location

Preferably install the sensor in an ascending pipe, and ensure a sufficient distance to the next pipe elbow: $h \geq 2 \times DN$

A0017061

To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:

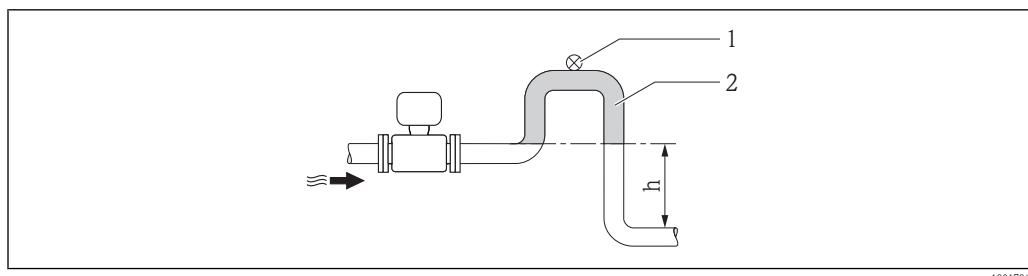

- Highest point of a pipeline.
- Directly upstream of a free pipe outlet in a down pipe.

Installation in down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes whose length $h \geq 5$ m (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the measuring tube. This measure also prevents the system losing prime, which could cause air pockets.

For information on the liner's resistance to partial vacuum (\rightarrow 29)

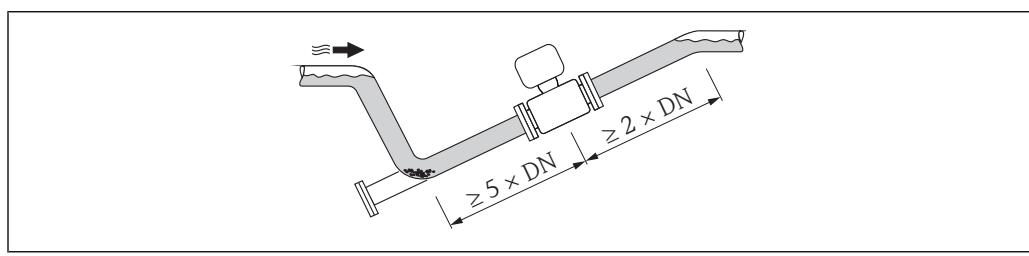

15 Installation in a down pipe

- 1 Vent valve
- 2 Pipe siphon
- h Length of down pipe

Installation in partially filled pipes

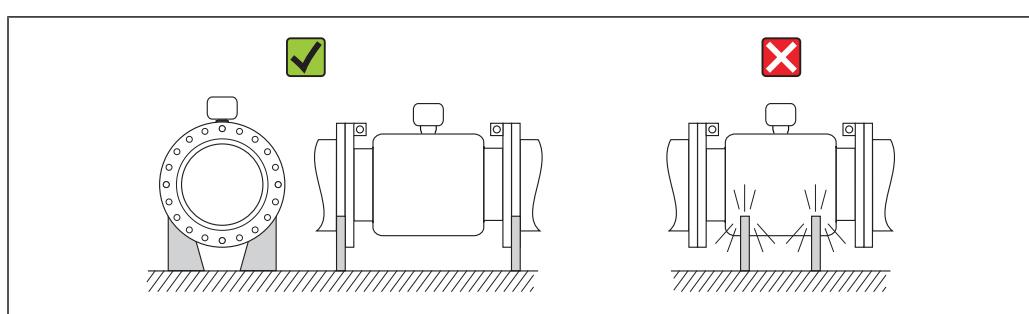

A partially filled pipe with a gradient necessitates a drain-type configuration. The empty pipe detection (EPD) function offers additional protection by detecting empty or partially filled pipes.

- Do not install the sensor at the lowest point in the drain: risk of solids accumulating.
- It is advisable to install a cleaning valve.

For very heavy sensors

If the nominal diameter $DN \geq 350$ (14 in), mount the sensor on a foundation of adequate load-bearing strength. Do not support the weight of the sensor on the metal casing as this could damage the metal casing and the internal magnetic coils.

Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

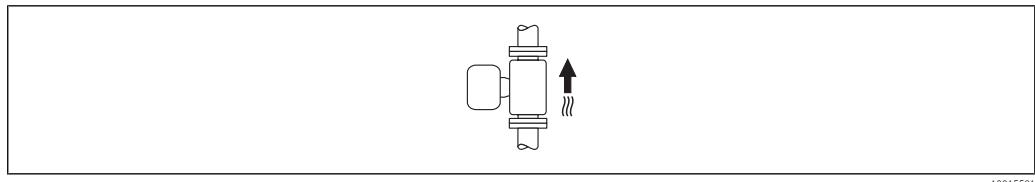

An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube.

The measuring device also offers the empty pipe detection function to detect:

- Partially empty measuring pipes
- Outgassing fluids
- Applications with variable process pressures

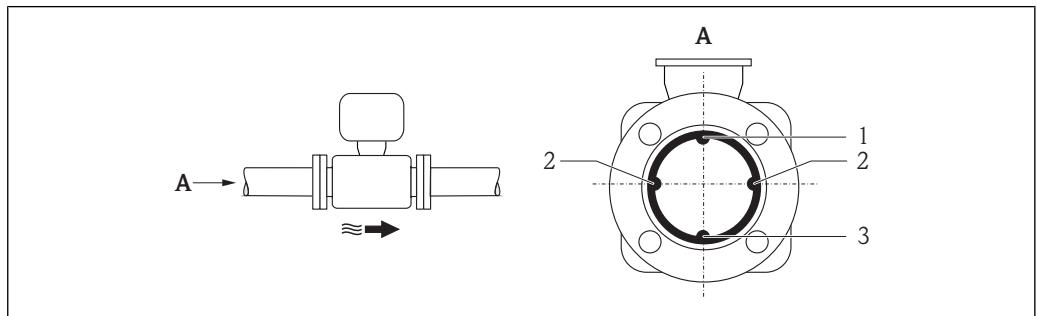

Vertical

This is the optimum orientation for self-emptying piping systems and for use in conjunction with empty pipe detection.

**Horizontal**

The measuring electrode plane must be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

- i** With horizontal orientation, empty pipe detection only works if the transmitter housing is pointing upwards as otherwise there is no guarantee that the empty pipe detection function will actually respond to a partially filled or empty measuring tube.

16 Horizontal orientation

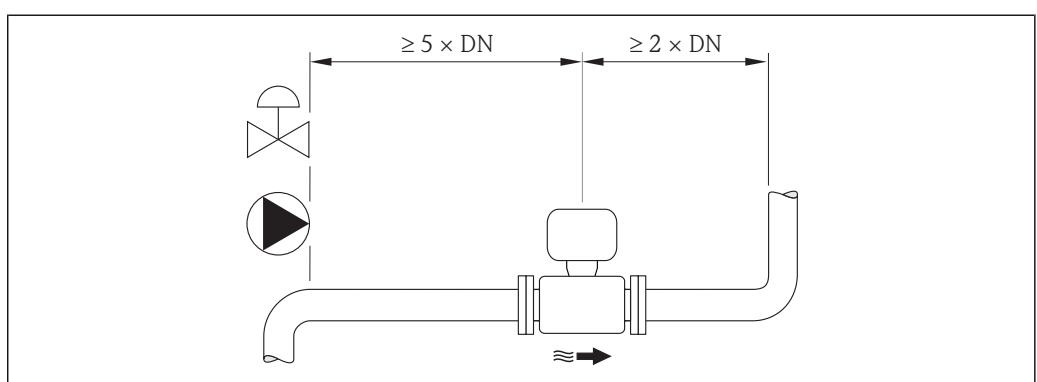

- 1 EPD electrode for empty pipe detection
- 2 Measuring electrodes for signal detection
- 3 Reference electrode for potential equalization

Inlet and outlet runs

If possible, install the sensor upstream from fittings such as valves, T-pieces or elbows.

Observe the following inlet and outlet runs to comply with accuracy specifications:

- Inlet run $\geq 5 \times DN$
- Outlet run $\geq 2 \times DN$

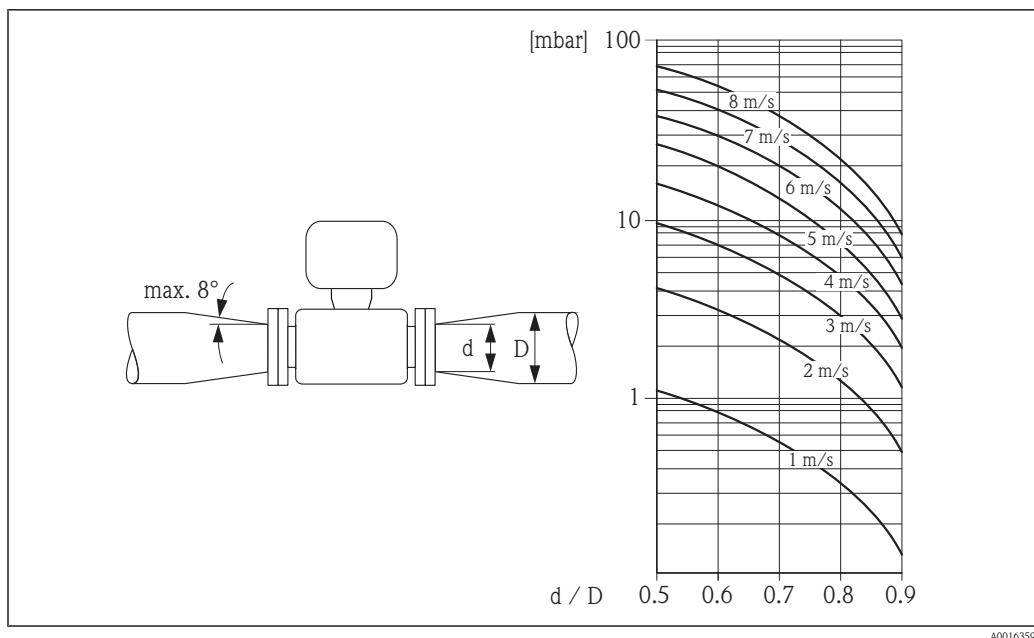

**Adapters**

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids.

The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders:

- Calculate the ratio of the diameters d/D .
- From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.

- i** The nomogram only applies to liquids with a viscosity similar to that of water.

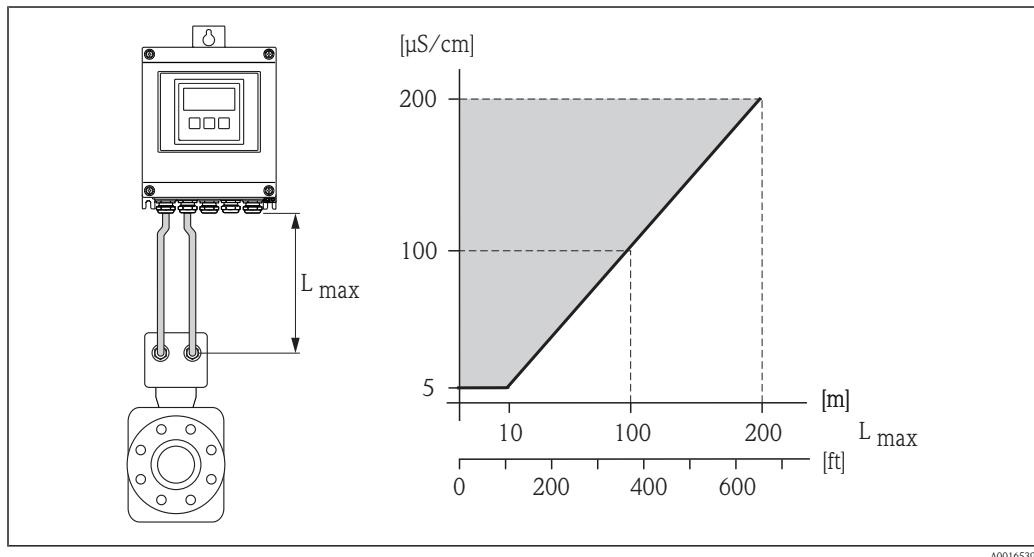

A0016359

Length of connecting cable

To ensure correct measuring results when using the remote version, observe the maximum permitted cable length L_{max} . This length is determined by the conductivity of the fluid.

- If measuring liquids in general: 5 $\mu\text{S}/\text{cm}$
- If measuring demineralized water: 20 $\mu\text{S}/\text{cm}$

A0016359

 17 Permitted length of connecting cable for remote version

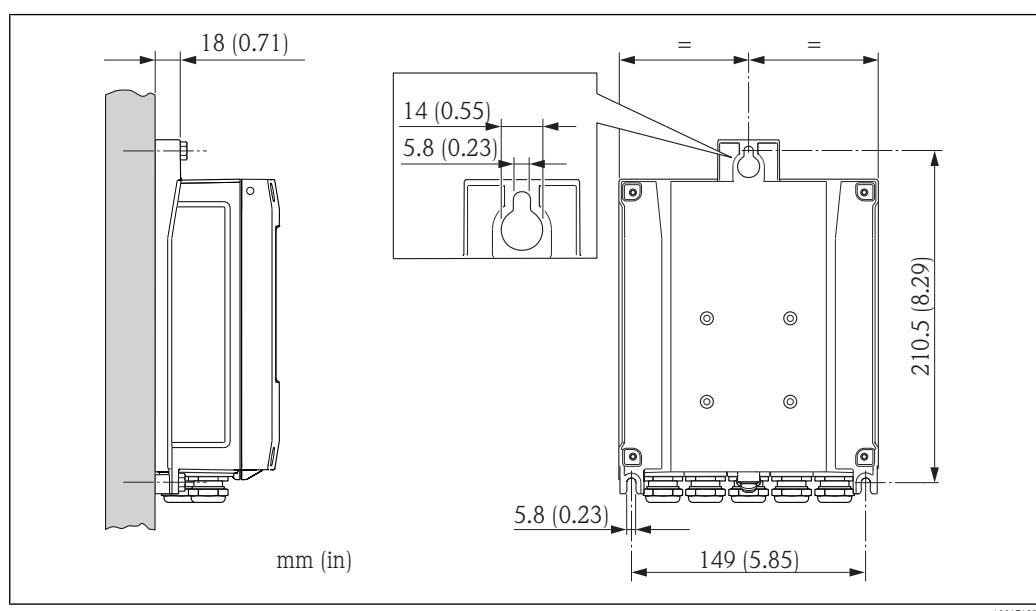

Area shaded gray = permitted range

L_{max} = length of connecting cable in [m] ([ft])

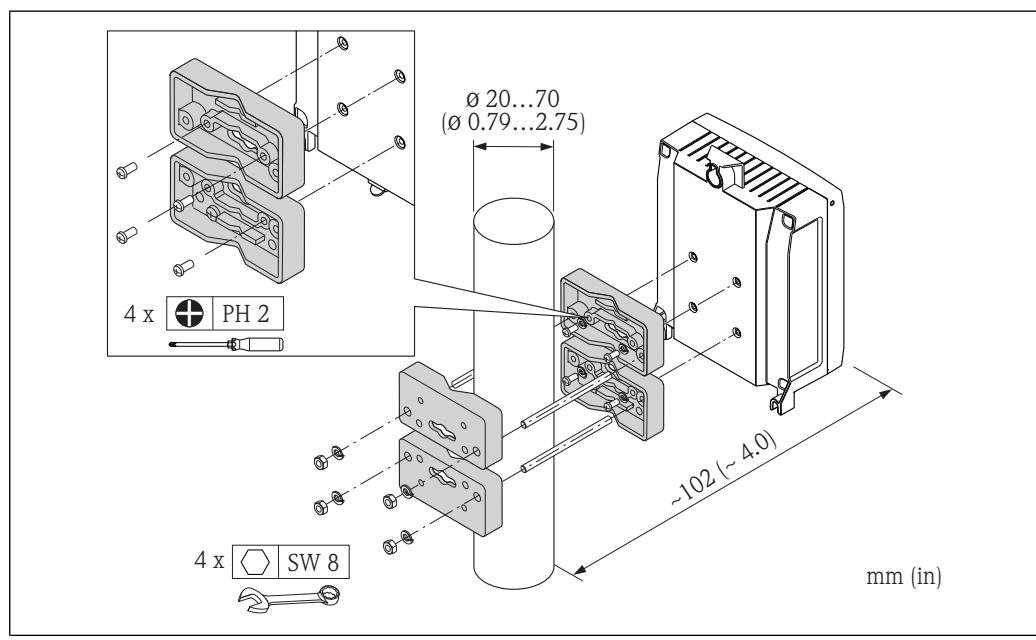

[$\mu\text{S}/\text{cm}$] = fluid conductivity

Installing the wall-mount housing

Wall mounting

Pipe mounting

i A separate mounting kit can be ordered from Endress+Hauser for pipe mounting (→ 52).

Special mounting instructions

Weather protection cover

To ensure that the optional weather protection cover can be easily opened, maintain the following minimum head clearance: 350 mm (13.8 in)

Environment

Pressure tightness*Liner: hard rubber*

Nominal diameter		Limit values for absolute pressure in [mbar] ([psi]) for fluid temperatures:		
[mm]	[in]	+25 °C (+77 °F)	+50 °C (+122 °F)	+80 °C (+176 °F)
50...2000	2...78	0 (0)	0 (0)	0 (0)

Liner: polyurethane

Nominal diameter		Limit values for absolute pressure in [mbar] ([psi]) for fluid temperatures:	
[mm]	[in]	+25 °C (+77 °F)	+50 °C (+122 °F)
25...1200	1...48	0 (0)	0 (0)

Flow limit

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum velocity of flow is between 2 to 3 m/s (6.56 to 9.84 ft/s). Also match the velocity of flow (v) to the physical properties of the fluid:

- $v < 2 \text{ m/s}$ (6.56 ft/s): for abrasive fluids (e.g. potter's clay, lime milk, ore slurry)
- $v > 2 \text{ m/s}$ (6.56 ft/s): for fluids producing buildup (e.g. wastewater sludges)

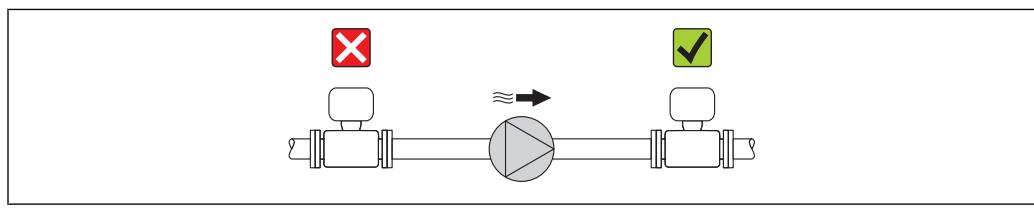

For an overview of the measuring range full scale values, see the "Measuring range" section (→ 6)

Pressure loss

- No pressure loss occurs if the sensor is installed in a pipe with the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 (→ 23)

System pressure

- Never install the sensor on the pump suction side in order to avoid the risk of low pressure, and thus damage to the liner.
 - Furthermore, install pulse dampers if reciprocating, diaphragm or peristaltic pumps are used.
- i** ■ For information on the liner's resistance to partial vacuum (→ 29)
■ For information on the measuring system's resistance to vibration and shock (→ 26), (→ 26)

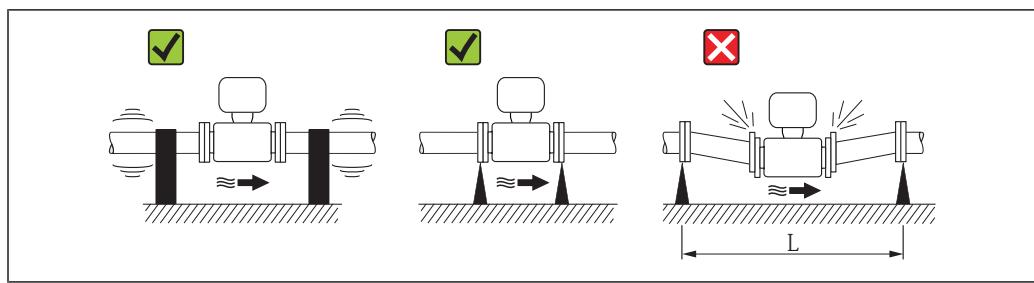

A0015594

Vibrations

In the event of very strong vibrations, the pipe and sensor must be supported and fixed. It is also advisable to mount the sensor and transmitter separately.

- i** For information on the permitted resistance to vibration and shock (→ 26), (→ 26)

Materials**Transmitter housing**

- Order code for "Housing", option **M, N**: polycarbonate plastic
- Window material: polycarbonate plastic

Transmitter cable entries

Order code for "Housing", option M "Compact, polycarbonate"; option N "Remote, polycarbonate"

The various cable entries are suitable for hazardous and non-hazardous areas.

Electrical connection	Material
Cable gland M20 × 1.5	Plastic
Thread G ½" via adapter	Nickel-plated brass
Thread NPT ½" via adapter	Nickel-plated brass

Connecting cable for remote version

- Electrode cable: PVC cable with copper shield
- Coil current cable: PVC cable with copper shield

Sensor housing

- DN 25 to 300 (1 to 12"): aluminum coated AlSi10Mg
- DN 50 to 300 (2 to 12"): carbon steel with protective varnish (IP68)
- DN 350 to 2000 (14 to 78"): carbon steel with protective varnish

Sensor connection housing

- Aluminum coated AlSi10Mg (IP66/67)
- DN 50 to 300 (2 to 12"): polycarbonate (IP68)

Sensor cable entries

Order code for "Housing", option N "Remote, polycarbonate"

The various cable entries are suitable for hazardous and non-hazardous areas.

Electrical connection	Material
Cable gland M20 × 1.5	Nickel-plated brass
Thread G ½" via adapter	Nickel-plated brass
Thread NPT ½" via adapter	Nickel-plated brass

Measuring tubes

- DN 25 to 300 (1 to 12"): stainless steel 1.4301/304, 1.4306/304L; for carbon steel flanges with Al/Zn protective coating
- DN 50 to 300 (2 to 12"): for carbon steel flanges with protective varnish (IP68)
- DN 350 to 2000 (14 to 78"): stainless steel 1.4301/304, 1.4306/304L; for carbon steel flanges with protective varnish

Liner

- DN 25 to 1200 (1 to 48"): polyurethane
- DN 50 to 2000 (2 to 78"): hard rubber

Electrodes

1.4435/304L, Alloy C-22, tantalum

Process connections

EN 1092-1 (DIN 2501)

DN 25 to 2000 (1 to 78")¹⁾: 1.4571/316L, C22, FE 410W B, S235JRG2

*ASME B16.5*DN 25 to 600 (1 to 24")¹⁾: A105, 316L*AWWA C207*

DN 1200 to 1800 (48 to 72"): 1.0425/316L (P265GH)

AS 2129

DN 50 to 1200 (2 to 48"): A105, S235JRG2, S275JR

AS 4087

DN 50 to 1200 (2 to 48"): A105, S275JR

*JIS B2220*DN 25 to 300 (1 to 12")¹⁾: HII, S235JRG2, 1.0425/316L**Seals**

In accordance with DIN EN 1514-1

Accessories*Weather protection cover*

Stainless steel 1.4301

Ground disks

1.4435/316L, Alloy C-22, tantalum

Fitted electrodes

Measurement, reference and empty pipe detection electrodes available as standard with:

- 1.4435/304L
- Alloy C-22
- Tantalum

Optionally available with DN 350 to 2000 (14 to 78"):

Exchangeable measuring electrodes made from 1.4435/304L

Process connections

Flange connections:

- EN 1092-1 (DIN 2501)²⁾
 - DN ≤ 300 (12"), fixed flange (PN 10/16/25/40) = form A
 - DN ≥ 350 (14"), fixed flange (PN 6/10/16/25) = flat face
- ASME B16.5
 - DN 25 to 600 (1 to 24"), fixed flange (Class 150)
 - DN 25 to 150 (1 to 6"), fixed flange (Class 300)
- AWWA C207
 - DN 1200 to 1800 (48 to 72"), fixed flange (Class D)
- AS 2129
 - DN 50 to 1200 (2 to 48"), fixed flange (Table E)
- AS 4087
 - DN 50 to 1200 (2 to 48"), fixed flange (PN 16)
- JIS B2220
 - DN 50 to 300 (2 to 12"), fixed flange (10K)
 - DN 25 to 300 (1 to 12"), fixed flange (20K)

For information on the materials of the process connections (→ 47)

Surface roughness

Electrodes with 1.4435/304L, Alloy C-22, tantalum:

≤ 0.3 to 0.5 µm (11.8 to 19.7 µin)

(All data relate to parts in contact with fluid)

1) DN ≤ 300 (12") with Al/Zn protective coating, DN ≥ 350 (14") with protective varnish

2) Dimensions as per DIN 2501, DN 65 (2 ½") PN 16 and DN 600 (24") PN 16 only as per EN 1092-1

Operability

Operating concept

Operator-oriented menu structure for user-specific tasks

- Commissioning
- Operation
- Diagnostics
- Expert level

Rapid and safe commissioning

- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief explanations of the individual parameter functions

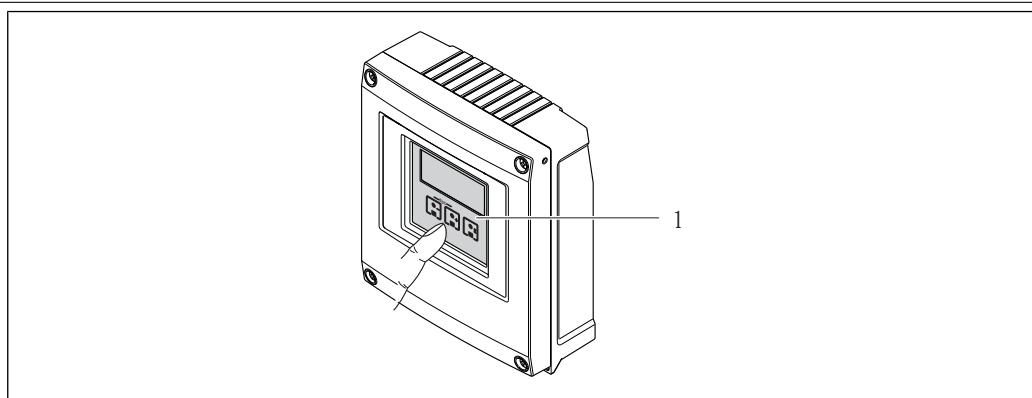

Reliable operation

- Operation in the following languages:
 - Via local display:
English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech
 - Via "FieldCare" operating tool:
English, German, French, Spanish, Italian, Dutch, Japanese
 - Via Web browser:
English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech
- Uniform operating philosophy applied to device, operating tools and Web browser
- If replacing the electronic module, transfer the device configuration via the plug-in memory (HistoROM DAT) which contains the process and measuring device data and the event logbook. No need to reconfigure.

Efficient diagnostics increase measurement availability

- Troubleshooting measures can be called up via the device, operating tools and Web browser
- Diverse simulation options and optional line recorder functions

Local operation

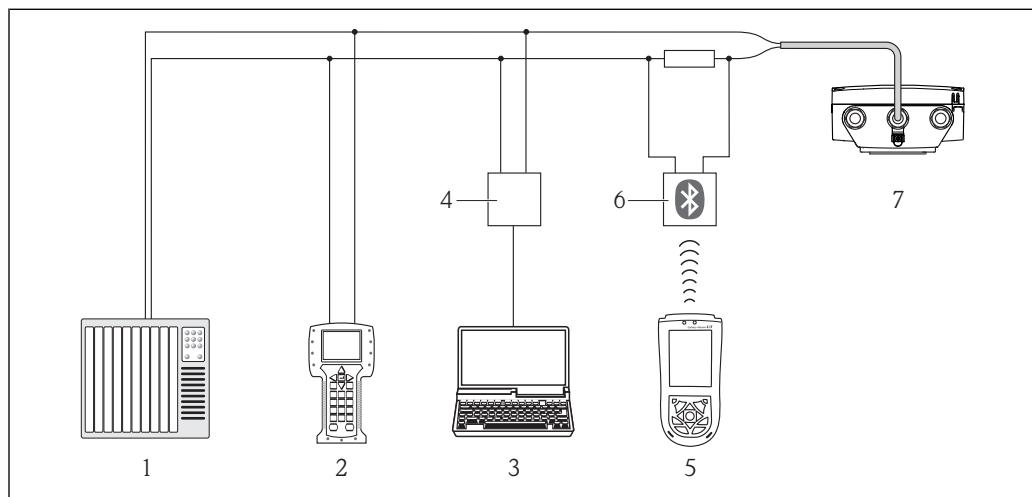

1 Operation with touch control

Display elements

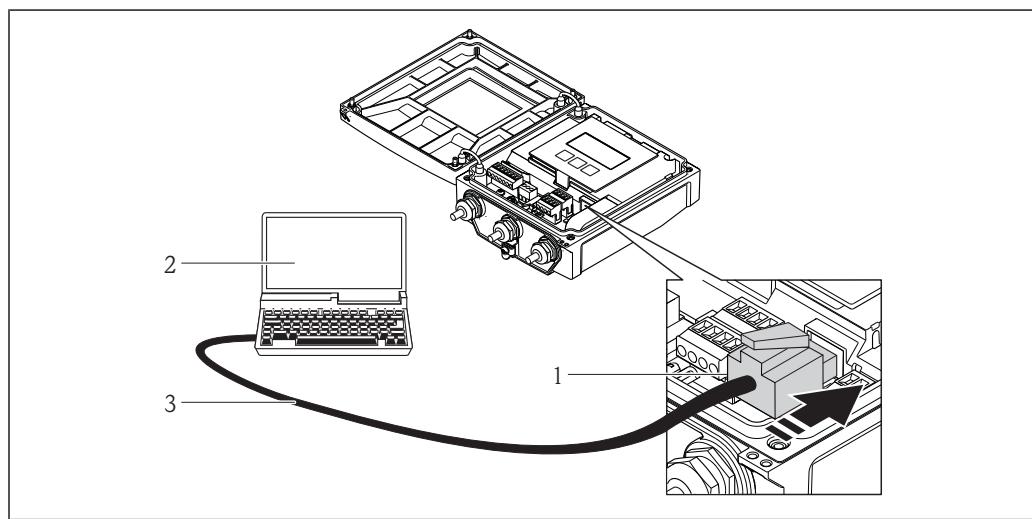

- 4-line display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: -20 to +50 °C (-4 to +122 °F)
The readability of the display may be impaired at temperatures outside the temperature range.

Operating elements

External operation via touch control; 3 optical keys: , ,

Remote operation**Via HART protocol****26 Options for remote operation via HART protocol**

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX100
- 6 VIATOR Bluetooth modem with connecting cable
- 7 Transmitter

Via service interface (CDI-RJ45)

- 1 Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server
- 2 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
- 3 Standard Ethernet connecting cable with RJ45 connector

Certificates and approvals**CE mark**

The measuring system is in conformity with the statutory requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

C-Tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex approval	<p>cCSAus</p> <p>Currently, the following versions for use in hazardous areas are available:</p> <p><i>NI (Ex nA, Ex nL)</i> Class I Division 2 Groups ABCD; NIFW*</p> <p>* = NIFW parameter as per Control Drawings</p>

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered from Endress+Hauser either directly with the device or subsequently. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Cleaning	Package	Description
	Electrode cleaning circuit (ECC)	The electrode cleaning circuit (ECC) function has been developed to have a solution for applications where magnetite (Fe_3O_4) deposits frequently occur (e.g. hot water). Since magnetite is highly conductive this build up leads to measuring errors and ultimately to the loss of signal. The option is designed to AVOID build up of highly conductive matter and thin layers (typically magnetite).

Diagnostics functions	Package	Description
	HistoROM extended function	<p>Comprises extended functions concerning the event log and the activation of the measured value memory (data logger).</p> <p>Event log: Memory volume is extended from 20 message entries (basic version) to up to 100 entries.</p> <p>Data logging (line recorder):</p> <ul style="list-style-type: none"> ■ Memory capacity for up to 1000 measured values is activated. ■ 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user. ■ Data logging is visualized via the local display or FieldCare.

Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

For the sensor

Accessories	Description
Ground disks for flange connections	Are used to ground the fluid in lined measuring tubes to ensure proper measurement.  For details, see Installation Instructions EA00070D

Communication-specific accessories

Accessories	Description
Commubox FXA191 HART	For intrinsically safe HART communication with FieldCare via the RS232C interface.  For details, see "Technical Information" TI00237F
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB interface.  For details, see "Technical Information" TI00404F
Commubox FXA291	Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop.  For details, see "Technical Information" TI00405C
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.  For details, see "Technical Information" TI00429F and Operating Instructions BA00371F
WirelessHART adapter	Is used for the wireless connection of field devices. The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity.  For details, see Operating Instructions BA00061S
Fieldgate FXA320	Gateway for the remote monitoring of connected 4-20 mA measuring devices via a Web browser.  For details, see "Technical Information" TI00025S and Operating Instructions BA00053S
Fieldgate FXA520	Gateway for the remote diagnostics and remote configuration of connected HART measuring devices via a Web browser.  For details, see "Technical Information" TI00025S and Operating Instructions BA00051S
Field Xpert SFX100	Compact, flexible and robust industry handheld terminal for remote configuration and for obtaining measured values via the HART current output (4-20 mA).  For details, see Operating Instructions BA00060S

Service-specific accessories

Accessories	Description
Applicator	Software for selecting and sizing Endress+Hauser measuring devices: <ul style="list-style-type: none"> ■ Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, accuracy or process connections. ■ Graphic illustration of the calculation results Administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. Applicator is available: <ul style="list-style-type: none"> ■ Via the Internet: https://wapps.endress.com/applicator ■ On CD-ROM for local PC installation.

<p>W@M</p> <p>Life cycle management for your plant W@M supports you with a wide range of software applications over the entire process: from planning and procurement, to the installation, commissioning and operation of the measuring devices. All the relevant device information, such as the device status, spare parts and device-specific documentation, is available for every device over the entire life cycle. The application already contains the data of your Endress+Hauser device. Endress+Hauser also takes care of maintaining and updating the data records.</p> <p>W@M is available:</p> <ul style="list-style-type: none"> ■ Via the Internet: www.endress.com/lifecyclemanagement ■ On CD-ROM for local PC installation.
<p>FieldCare</p> <p>FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.</p> <p> For details, see Operating Instructions BA00027S and BA00059S</p>

System components	Accessories	Description
	<p>Memograph M graphic display recorder</p> <p>The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick.</p> <p> For details, see "Technical Information" TI00133R and Operating Instructions BA00247R</p>	

Documentation
